

Get all of the benefits of a flowmeter, temperature meter, and BTU calculator in one unit with the Series TUF Ultrasonic Energy Meter.

Michigan City, Indiana – Dwyer Instruments, the preferred source for your complete range of practical and affordable instrumentation, is announcing the release of the Series TUF Ultrasonic Energy Meter.

The Series TUF Ultrasonic Energy Meter is a highly accurate, Class 2, energy meter. Through the use of ultrasonic technology this meter measures heating and cooling energy consumption for a multitude of different applications, such as: chillers, boilers, and/or tenant billing applications on large or small systems. The Series TUF is an all-in-one highly accurate, compact flowmeter with integral communication, temperature meter, and calculator. Users can keep maintenance to a minimum with the Series TUF, as this meter has no moving parts to promote build up. The TUF's 8-digit LED display allows users to easily read the meter's recorded values; including temperature, flow-rate, energy consumption, and more. The Series TUF is offered in a variety of different pipe sizes and flow rates to more easily choose the correct unit for any application. Eliminate the hassle of using multiple instruments when making calculations by using the Series TUF.

Product applications include:

- Heat metering
- Utilities billing
- Tenant billing
- Monitoring of water heating or cooling: radiators, fan coils
